Nestuity Software Developer (Job Description)

About the Job

Who we are

Nestuity is a startup that wants to make parenting easier. We help parents with the mental fatigue and stress of having a baby by providing them with insightful information and features that help them stay organized and informed with financial costs and other parenting responsibilities.

What you'll do

We are seeking a full-stack Software Engineer to maintain and enhance an existing web-application. In addition, you will help us develop a mobile application while adhering to best practices.

Responsibilities

- Fix any bugs that may arise during the development of the new mobile application or with the maintenance of the existing services

- Add new features that enhance the customer experience of our product

- Write clean, and maintainable code following best practices and design patterns

- Leverage Gen-AI tools to boost productivity

- Collaborate and communicate effectively to design and implement new features that delight our costumers.

- Write Unit Tests and Integration Tests

Requirements

- REST APIs working knowledge

- Experience with Spring Boot (Java)

- Knowledge in data migration and synchronization

- Strong proficiency in HTML, CSS, JavaScript, and React for frontend

- Experience working with Git

- Are enrolled in a Bachelor's degree or above in Computer Science, Computer Engineering, Data Science, or other STEM related fields

- Contribute to troubleshooting and technical support of the product

Nice To Have

- Previous experience with mobile development

- Experience working with Docker

- Previous experience working on a CI/CD pipeline
